

Test Report

REPORT NO.: PUB20B00320

Date: 2020/12/21

Page : 1 of 4

VICTAMAX LLC

Rockville Innovation Centre, 155 Gibbs Street, #556, Rockville, MD 20850 USA

The following sample(s) was/were submitted and identified by/on behalf of client as:

Sample Name : "BACTOSTAT" MMBS RESIN
Applicant : DRAGONCHEM LIMITED
Address of Applicant : ROOM 03, 9/F, TRUST CENTRE, 912-914 CHEUNG SHA WAN ROAD, KOWLOON, HONG KONG
Tel No./Contact Person : (852) 23190918 / Derick Yip
Packaging Condition : Please refer to the photo for sample shown at the last page of this report.
Quantity : 25 pieces
Storage Condition : Room temperature
Item No. : SB-1643
Lot/Batch No. : 20200820
Manufacturer/Agent/Importer : THE HONGKONG POLYMER SCIENCE LIMITED
Date of Manufacturing : Aug.2020
Date of Expiry : 24 months
Date of Sample Received : 2020/11/25
Date of Testing : 2020/11/25 ~ 2020/12/21

Test Requested: Plastic Sample Germ-repellent test

Test Method : With reference to ISO22196:2011, Measurement of antibacterial activity on plastics and other non-porous surfaces.

Test Results : -Please refer to next page(s)-

Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested.

Test Report

REPORT NO.: PUB20B00320

Date: 2020/12/21

Page : 2 of 4

VICTAMAX LLC

Rockville Innovation Centre, 155 Gibbs Street, #556, Rockville, MD 20850 USA

Test Method :

1. *S. aureus* or *E. coli* will be subculture twice with NB from frozen stock.
2. Dilute this inoculum with 1/500 NB so that the number of *S. aureus* is about 6×10^5 cells/mL and about 6×10^6 cells/mL for *E. coli*.
3. Place each test piece (a square of 50 mm \pm 2 mm) in a sterilized petri dish making the test surface up.
4. Take exactly 0.4 mL of the test inoculum, and instill it onto each test piece.
5. Cover the instilled test inoculum with a film (a square of 40 mm \pm 2 mm), press the film so that the test inoculum spreads over the film, and place the lid of the petri dish on.
6. Incubate the petri dish containing the test piece inoculated with the test inoculum (3 untreated test pieces and 3 test pieces) at a temperature of 35 ± 1 °C and a relative humidity of not less than 90 % for 24 ± 1 h.
7. After incubating, the cover film of the test sample is removed and discarded. Hold the test sample with a tweezers and tilt it at an angle of ~ 90 degree to allow the inoculum (0.4 mL) to slide off the surface into the petri dish. Gently tap the edge of the test sample against the petri dish to remove any droplets that remain on the surface. The petri dish containing the excess inoculum is discarded. The sample is transferred to a new sterile petri dish.
8. With the tweezers, soak each test sample into 100 mL normal saline for 3 seconds and then hold the test sample and tilt it at an angle of ~ 90 degree to slide any the rinsing saline solution. Gently tap the edge of the test sample against the petri dish to remove any droplets that remain on the surface. The petri dish is discarded.
9. Repeat the 8 soaking procedure with fresh normal saline twice to achieve a thorough cleansing of any remaining freely flowing bacterial inoculum. (totally soaking for rinse three times). The rinsed sample is finally placed on a new sterile petri dish and is ready for sampling by the swab method.
10. The surface of test article is swabbed with a wet (with normal saline) cotton swab.
11. Each swab is extracted with sonication for 10 minutes and hands shaking for 50 times in 100 mL normal saline and then perform 10 fold serial dilutions.
12. The extract or dilution is filtered through 0.45 μ m membrane and then place the membranes onto NA plates.
13. All the NA plates will be incubated at 30~35°C and enumerated after 3~7 days of incubation.
14. The germ-repellent rate will calculate as

$$\text{Germ repellent rate(\%)} = \frac{(\text{mean CFU/device of control article}) - (\text{mean CFU/device of test article})}{\text{mean CFU/device of control article}} \times 100(\%)$$

Test Results :

<u>Organism</u>	<u>Original inoculum (CFU/device)</u>	<u>Contact time</u>	<u>Counts of the control at contact time (CFU/device)</u>	<u>Counts of the sample at contact time (CFU/device)</u>	<u>Germ-repellent rate (%)</u>
<i>Escherichia coli</i>	3.1×10^7	24 hours	6.1×10^4	7.2×10^3	88.1
<i>Staphylococcus aureus subsp. aureus</i>	4.0×10^5	24 hours	8.3×10^3	1.3×10^2	98.5

NOTE :

- 1.The test report merely reflects the test results of the consigned matters of the client and is not a certification of the legitimacy of the related products.
- 2.All items in this testing report is based on the request from client and we are responsible for that.
- 3.The content of this report is invalid if it is not presented as the entire report.
- 4.Organism No.:

Escherichia coli BCRC 11634 ; ATCC 8739.

Staphylococcus aureus subsp. aureus BCRC 10451 ; ATCC 6538P.

- END -
